```
var BasicGame = {};
2
3
   BasicGame.Preloader = function (game) {
4
        this.ready = false;
5
   };
 6
7
   BasicGame.Preloader.prototype = {
8
9
        preload: function () {
10
            //Displays a loading screen message while the assets are loaded into
   menory
            this.preloaderText = this.add.text(this.world.centerX, this.world.c
11
   enterY, 'Loading...', {
                fontSize: '96px',
12
                fill: '#fff',
13
                align: 'center'
14
15
            });
16
            this.preloaderText.anchor.setTo(0.5, 0.5);
17
18
            //preload the images, sprites and audio assets into memory
            this.load.image('logo', 'assets/PhaserLogo.png');
19
            this.load.image('starfield', 'assets/starfield.png');
20
            this.load.image('startButton', 'assets/startButton.png');
21
            this.load.image('ship', 'assets/ship.png');
22
            this.load.image('ufo', 'assets/ufo.png');
23
            this.load.image('life', 'assets/lives.png');
24
            this.load.image('bullet', 'assets/bullet.png');
25
26
        },
27
28
        create: function () {
29
30
        },
31
32
        update: function () {
33
34
                  You don't actually need to do this, but I find it gives a
    much smoother game experience.
35
                  Basically it will wait for our audio file to be decoded
    before proceeding to the MainMenu.
36
            // You can jump right into the menu if you want and still play
    the music, but you'll have a few
37
                  seconds of delay while the mp3 decodes - so if you need your
    music to be in-sync with your menu
                  it's best to wait for it to decode here first, then carry on.
38
39
                  If you don't have any music in your game then put the
40
    game.state.start line into the create function and delete
41
                  the update function completely.
```
